

Special Eurobarometer 372

Climate change

REPORT

Fieldwork: June 2011

Publication: October 2011

Special Eurobarometer 372 / Wave EB75.4 – TNS opinion & social

This survey has been requested by the Directorate-General Climate action and coordinated by Directorate-General for Communication (DG COMM "Research and Speechwriting" Unit).

http://ec.europa.eu/public_opinion/index_en.htm

This document does not represent the point of view of the European Commission. The interpretations and opinions contained in it are solely those of the authors.

SPECIAL EUROBAROMETER 372

“Climate Change”

TECHNICAL SPECIFICATIONS

Between the **4th of June and the 19th of June 2011**, TNS Opinion & Social, a consortium created between TNS plc and TNS opinion, carried out the wave 75.4 of the **EUROBAROMETER**, on request of the EUROPEAN COMMISSION, Directorate-General for Communication, “Research and Speechwriting”.

The SPECIAL EUROBAROMETER 372 is part of wave 75.4 and covers the population of the respective nationalities of the European Union Member States, resident in each of the Member States and aged 15 years and over. The basic sample design applied in all states is a multi-stage, random (probability) one.

In each country, a number of sampling points was drawn with probability proportional to population size (for a total coverage of the country) and to population density.

In order to do so, the sampling points were drawn systematically from each of the "administrative regional units", after stratification by individual unit and type of area. They thus represent the whole territory of the countries surveyed according to the **EUROSTAT NUTS II** (or equivalent) and according to the distribution of the resident population of the respective nationalities in terms of metropolitan, urban and rural areas. In each of the selected sampling points, a starting address was drawn, at random. Further addresses (every Nth address) were selected by standard "**random route**" procedures, from the initial address. In each household, the respondent was drawn, at random (following the "closest birthday rule").

All interviews were conducted **face-to-face** in people's homes and in the appropriate national language. As far as the data capture is concerned, **CAPI** (*Computer Assisted Personal Interview*) was used in those countries where this technique was available.

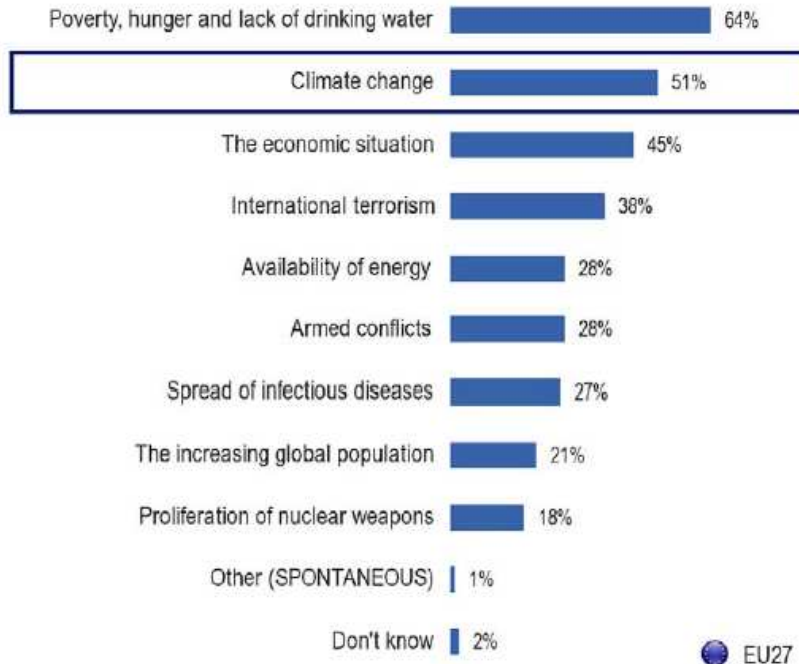

For each country a comparison between the sample and the universe was carried out. The Universe description was derived from Eurostat population data or from national statistics offices. For all countries surveyed, a national weighting procedure, using marginal and intercellular weighting, was carried out based on this Universe description. In all countries, gender, age, region and size of locality were introduced in the iteration procedure.

For international weighting (i.e. EU averages), TNS Opinion & Social applies the official population figures as provided by EUROSTAT or national statistic offices. The total population figures for input in this post-weighting procedure are listed above.

Readers are reminded that survey results are estimations, the accuracy of which, everything being equal, rests upon the sample size and upon the observed percentage. With **samples of about 1,000 interviews**, the real percentages vary within the following confidence limits:

Observed percentages	10% or 90%	20% or 80%	30% or 70%	40% or 60%	50%
Confidence limits	± 1.9 points	± 2.5 points	± 2.7 points	± 3.0 points	± 3.1 points

QD1T. Which of the following do you consider to be the single most serious problem facing the world as a whole? Any others?
